

USE GUIDELINES

Index Usage

After each listed author or indexed subject term is two types of numbers. The first number, in parentheses, is the total number of articles indexed by that name or subject term. The number(s) following the number in parentheses will be the record number of the citation(s). This record number will be used to find the citation in the bibliography. Each citation contains the information on where the material is published, author(s) and possibly an abstract or summary.

It is advised that you review the indexes (Author Index, page 2 to 16 or Subject Term Index, page 17 to 21) for either authors or subjects of interest. When you find the terms most likely to be relevant to your interest, right down the record numbers on a piece of scrap paper. This helps you keep track of the items you have already looked at so you avoid repeating a search for a citation already studied.

Computer File Usage

Most of the common word processing programs in use have a 'FIND' feature. If you are using Windows based software, it is most likely found in the 'EDIT' menu. Check your manual if you have troubles finding this feature. The feature will start with a dialogue window asking you what to find. Enter [Rec# **] where '**' is the record number you found from the index. It is important that the pound symbol '#' follows 'Rec' without a space and there is a single space between '#' and the record number being searched.

It is possible you will lose some of the formatting upon importing the 'Rich Text Format' files into your word processor. Often this will be corrected by simply changing the margin or tab settings. I kept the use of formatting to the minimum (e.g., no bolding or italicizing). The original has 1.5 inch right margin, 1 inch top, bottom, and left margins using a single font size 12, Times New Roman.

Getting Copies of Citations

I have not had a chance to search out each citation to confirm the accuracy of the information that I have obtain from other sources, but I feel most are correct. The librarian you are using to find the publication may need the ISSN number or CODEN number to help them find the publication. My database has some of these plus other tidbits that will help you locate the citation. Contact me if you find errors or need additional information to assist your librarian locate the citation for you.

Future of Project

This is an on-going project. Your feed back will be valued for future updates. If you find citations that you feel are important to get into the database, corrections to existing citations or modifications to subject terms used for indexing, please send them to me.

It is hoped that the next edition of this database will also be available in a 'Hyper Text format' which could be read by any Internet Web browser and obtained over the Internet. This would greatly improve the searching out specific topics or citations. When this is available, I will send a notice to those who have ordered the database from me.
